For Children With Inherited Bleeding Disorders

- While no helmet can protect against all injuries, studies show that wearing an approved cycling helmet can reduce the chance of serious head injury by 85%.
- Nearly 1 million children under the age of 14 are treated each year for bicycle injuries.
- Some 600 of these children have fatal injuries, and another 260,000 will be admitted to hospitals due to bicycle-related head trauma.
- Boys are injured on bicycles twice as often as girls.
- Fatalities are more likely to occur during warm months and during peak hours (after school from 3:00 to 6:00 p.m.).

Helmet Sizes	Head Cicumference
1. Toddler	19 1/4" - 20 1/2"
2. Child	20 1/2" - 21 5/8"
3. Youth	22" - 23 1/4"
4. Adult	23 1/4" - 24 1/2"

Place measuring tape 1" above eyebrow to measure head circumference
